

Again something similar to Adriatic storm cases, but not that intensive.
 Start of the model 03rd of February 2003 12 UTC. On figures below 42-hour forecast of MSL Pressure on LACE domain and verification of MSL Pressure for 48-hour forecast with SINOP data for Croatian and LACE domain are shown.

Model version AL25T1_op2.

42-hour forecast of MSL Pressure on LACE domain

Comparison of direct model output MSL Pressure with the SINOP MSL Pressure for two stations, start of the model 03rd of February 2003 12 UTC.

ALADIN forecast of MSL Pressure were quite good in area with low pressure.
